Current Role Description

Understanding Requirements, Stakeholder Interview, Information Architecture, Lo-Fi Wireframe, Hi-Fi Wireframe, Prototyping, Mockup Creation, App mockup creation if required, Mockup Prototyping and Responsive HTML integrations using flexbox in Bootstrap 4, Angular Material Integrations, Routing.

These are the process I usually follow to make a product. Once the analysis, Mockups and Html integrations are done, my job is to prepare the Technical Documents for the developers with Help of product development manager. Once the document is completed My responsibility is to diligently work with project development managers and other team members to start the development of the product.

Since I was also a developer so I can talk with developers in their language in terms of feasibility and coding. With the aim of simplicity and aesthetics, as an end-to-end designer, I care greatly for users and am forever fueled by a passion for solving challenging problems through detail-oriented great user experiences including user interface design, prototyping, and branding.

Project Summary

Project	Wharf Street Strategies Website
Client/Company	Wharf Street Strategies

Period	June 2019 – May- 2019
Description	A blockchain development company providing end to end solution worldwide.
Role	Product Designer
Environment	Adobe XD, VS Code
Responsibility	Requirement Analysis, LO-FI Wireframes and Mockups using Adobe XD, HTML Integration.

Project	Master Bounty (OffSite) Prototype
Client/Company	Wharf Street Strategies
Period	June 2019 – May- 2019
Description	Master Bounty is a white Label Solution where different companies will post their social media posts for like, share, comment, and some creative activities like logo creation, web design, brochure creation, etc. and community will participate in that campaign and gain rewards points. Later, they can convert these points in money and make a withdrawal. In this, all the activities will be monitored by BOT. It is a completely automated application where an admin needs not have to sit and manually verify all the user tasks. Our application does this job automatically. Since it is a white label solution for the companies who will register in master bounty and become a member by choosing a membership plan. Then we will verify all the details of the company and approve for posting the campaign from admin panel.
Role	Product Designer
Environment	Adobe XD, VS Code, Angular
Responsibility	Requirement Analysis, Stakeholder Interview, Competitive Analysis, LO-FI Wireframes and Mockups using Adobe XD, FRD, HTML Integration.
